SOUNDPRO CLADDING INSTALLATION

SOUNDPRO CLADDING PANEL

PANELLUX® SOUNDPRO CLADDING

PANELLUX® SoundPro Cladding is a sound absorbing mineral fiber panel wrapped in fabric. The color can be adjusted according to the interior design choices. Products are installed with Snap-In system so that the frames, nails and screws are not visible. The final appearance is neat and beautiful, while being able to be easily opened and reinstalled. It is ideal for interior cladding applications such as worship rooms / churches, seminar rooms, conference rooms, karaoke rooms, music studios and so on.

PANELLUX® SoundPro Cladding is made of **Armstrong®** mineral material 15mm fiber board with various colors and patterns. The installation uses the snap bar frame so that the screws and bolts are not visible.
